EXECUTIVE SUMMARY

Cybersecurity Engineer-in-Training with hands-on experience in application security, vulnerability assessment, SIEM log analysis, and network security, along with a strong foundation in networking concepts and operating system fundamentals. Built security tools like SecureCode AI and gained practical experience through cybersecurity labs and real-world projects. Ranked in the Top 8% on TryHackMe. Passionate about identifying vulnerabilities and helping organizations strengthen their security posture against cyber threats.

INTERNSHIP EXPERIENCE

AI Virtual Intern - Infosys Springboard | November 2025 – January 2026

[PROJECT](#)

- Developed an AI-powered system using Python and OCR to extract 20+ parameters from medical reports, applying multi-model analysis for anomaly detection, risk scoring, and clinical insight generation.
- Built a RAG-based chatbot (Groq API) delivering personalized health summaries, improving accessibility and interpretation of diagnostic data.

Ethical Hacking Intern (virtual) - Nativeva | February 2026 – March 2026

[PROJECT](#)

- Developed a multi-threaded TCP port scanner using Python (socket, threading) to automate port scanning and service identification during security assessments.
- Performed web application penetration testing using Burp Suite and Nmap to identify vulnerabilities such as SQL Injection, XSS, and security misconfigurations.

PROJECTS

1. SecureCode AI – AI-Based Secure Code Analysis Tool

[GITHUB LINK](#)

(Python, Streamlit, Machine Learning, Static Code Analysis)

- Developed an AI-based SAST and dependency analysis tool using Python, taint analysis, and ML to detect 20+ code and package vulnerabilities with line-level accuracy, improving early vulnerability detection.
- Built a Streamlit dashboard to generate automated security reports with CWE mapping and remediation guidance, reducing manual security review effort.

2. Reconx— Cyber Fingerprinting Toolkit

[GITHUB LINK](#)

(Python)

- Developed a modular cyber reconnaissance and fingerprinting toolkit using Python to perform host discovery, OS fingerprinting, port scanning, DNS/WHOIS lookup, and subdomain enumeration.
- Integrated web fingerprinting features including HTTP header analysis and SSL/TLS certificate inspection to identify web server technologies and configurations.

SKILLS SUMMARY

Technical Skills :

- Programming:** JavaScript (ES6+), Python, C, SQL
- Networking:** TCP/IP Model, OSI Model, Subnetting, IP Addressing, Routing & Switching Basics
- Networking Protocols :** DNS, DHCP, HTTP/HTTPS, FTP, SSH, SMTP, ARP, ICMP
- Operating system:** Linux (Kali, Parrot, Ubuntu), Windows, Basic Linux Administration
- Ethical hacking Tools:** Nmap, Burp Suite, Metasploit (Basic), SQLMap, Gobuster, Nikto, Nessus
- Monitoring & Analysis tools:** Wireshark, Splunk, Wazuh, VirusTotal, OSINT Tools
- Threat Detection & Intelligence:** OpenVAS, theHarvester, Burp Suite, SEToolkit
- Web Technologies:** React.js, Node.js, Express.js, MongoDB, HTML5, CSS3, Streamlit

Soft Skills : Leadership, Team collaboration, problem-solving, fast learning, adaptability.

CERTIFICATIONS

- Google Cybersecurity Professional Certificate – Coursera (2025)
- Junior Cybersecurity Career Analyst Path – Cisco Networking Academy (2025)
- Network Technician Pathway – Cisco Networking Academy (2026)
- Artificial Intelligence Primer – Infosys Springboard (2025)
- IT Primer – L&T EduTech (2024)

EDUCATION

B.Tech in CSE Cybersecurity – Jeppiaar University, Chennai

Expected Graduation: 2027 | CGPA: 9.52/10

- Coursework:** Secure Software system Engineering, DSA, OS, AI/ML, DL, OOPS, Information Retrieval, DBMS.
